

**CHE-141**  
**Organic Chemistry I**  
**Spring 2012**  
**Gustavus Adolphus College**

Prof. Scott Bur  
Office: 303B, Nobel Hall  
Telephone: 933-7038  
Email: sbur@gustavus.edu

**Textbooks**    Lecture: Organic Chemistry: A Biological Approach (2<sup>nd</sup> edition),  
McMurry. 2011  
Lab: Techniques in the Organic Laboratory; Pavia et al.;  
Brooks/Cole:Belmont, CA; 2002

**On-Line**        Sapling On-line Homework  
Moodle (<http://moodle.gac.edu/>)

**Supplies :** Molecular models.

**Classroom:** Nobel Hall Auditorium

**Office Hours:** My scheduled office hours are Mon & Wed: 3:30 to 4:30 and by arrangement

**HOMEWORK:**

Homework that is graded will be a combination of on-line problems through Sapling and problem sets. Due dates are set for the material so that **you will most likely have to figure a lot of things out on your own, before we cover it in lecture.** More on this below, but count on spending a significant amount of time on the homework.

**EXAMS:**

There will be four 1-hour exams that will consist of short answer and/or multiple-choice questions. In addition to asking you to be able to recall facts and principles from lectures and textbook readings, you will be asked to extend the principles you learned to new situations and to offer explanations of the behavior of compounds with which you are not familiar. Each exam will be "comprehensive" because each new concept builds upon previous material. So you will need to know material from earlier units. Test dates are as follows: February 24; March 16; April 13; and May 4. The final exam will be comprehensive, and will be in the NHS AUD on Friday, May 18 from 1:00 - 3:00 pm.

**PEER MENTORING**

To help you develop strong learning skills and to better understand the ethos of scientific inquiry you will participate in a Peer Mentoring program. This program is funded with a grant from the Howard Hughes Medical Institute (HHMI). Our goal is to help you be more successful in biology, chemistry and other coursework.

Each week, you will meet with a small group of peers also enrolled in BIO102 and/or CHE141. The sessions are led by a junior or senior biology, chemistry or biochemistry major. The sessions involve activities where you will practice application and synthesis of concepts, and gain an enhanced understanding. There are three main types of activities:

1. Lecture and Laboratory content reinforcement and practice
2. Skill building
3. How to think and act like a scientist

You are required to sign up for a peer-mentoring group in NHS 121 on T, Feb. 7th or W, Feb 8th between 5:00 and 9:00 pm. If you are enrolled in either BIO 102 Organismal Biology or CHE 141 Organic Chemistry, you will sign up for a group that will focus solely on that class. If you are enrolled in both BIO 102 and CHE 141, you will sign up for a group that does activities for both courses. Please bring your class and event schedule so you can choose the best time for you and your lifestyle. Peer mentors will be available to answer your questions.

You will meet with your group once a week. Bring a notebook and a pen/pencil to your session, and possibly a textbook. Do not use electronic devices with the possible exception of a computer if one is needed to complete the activity. A list of the Peer Mentoring activities for the semester is on Moodle. If you do not attend and actively participate in nine of the 11 peer mentoring sessions, you will lose 5% of your final course points. If you have any questions, please contact Pamela Kittelson, HHMI Peer Mentoring Coordinator at pkittels@gustavus.edu.

## GRADING

The breakdown of your grade is as follows:

Four one-period exams.....	40%
Homework.....	20%
Comprehensive final exam.....	20%
Laboratory.....	20%

Please note that the grade is based upon your cumulative point total. Laboratory performance is not graded separately then averaged. The total of your lab reports and notebook entries will be normalized, weighted, and added to your cumulative score before grades are assigned. **If you do not attend at least 9 peer mentoring meetings, you will lose 5% of your weighted total points at the end of the semester.**

The final cumulative total, weighted as shown above, will be assigned a grade based upon a standard scale: 93 - 100% = A; 90 - 92% = A-; 87 - 89% = B+; 83 - 86% = B; 82 - 80% = B-; etc. *I reserve the right to revise the grading scale as seems appropriate for the class.*

**If you do not complete all of the laboratory projects, you cannot pass the course, even if you've taken the course previously.**

## STUDENT RESPONSIBILITY

At Gustavus, we want students to be active in their own education. For the majority of you, this is your second semester at Gustavus, and you are still learning how the system works. One of the differences between your college experience and your previous educational experiences is the responsibility born by each party. Your teachers here are less likely to simply disseminate facts that you must regurgitate on an exam later; Rather, they are guides who will provide opportunities for you to expand your understanding of the world in which we live. *Gustavus faculty provide the opportunities for you to learn, but you must take advantage of those opportunities.* It is in this spirit that homework due-dates are set such that lecture is not the first time you will have encountered material. This allows you to know where you are having trouble and ask more relevant questions in lecture. I will do my best to help you understand the material, but you are ultimately responsible for that understanding.

## ACADEMIC HONESTY

As a community of scholars, the faculty and students of Gustavus Adolphus College have formulated an academic honesty policy and honor code system, which is printed in the Academic Bulletin and in the Gustavus Guide.  
(Academic Information and Policies, General Catalog)

The Honor Code at Gustavus is an expression of the importance with which we view academic integrity. Each faculty member is required to implement the Honor Code, and to define what is (or is not) authorized aid. It is the students' responsibility to ask clarifying questions when there is confusion regarding academic honesty. In this class, it is assumed that students are honest about their work. It is also understood that sometimes the boundaries can seem "fuzzy." If you find yourself in a situation where you are unclear about attributions or the use of sources, please ask. In the professional realm, issues of plagiarism and/or fabrication have ruined careers.

The first instance of cheating on an assignment or exam will result in a score of zero for that assignment or exam, and the Dean of Faculty will be informed of the incident. The second instance will result in a grade of F for the course.

To impress of the importance of these two items (student responsibility and academic honesty), I require that you sign the following pledge and return the signed page to me by the beginning of class on Friday, February 15.

**On my honor, I pledge that I will not give, receive, or tolerate others' use of unauthorized aid in completing my work.**

## STUDY HINTS

Success in organic chemistry requires practice. Much of the information builds upon concepts previously presented; **frequent review is essential**. Here are a few tips to help keep the course material under control:

### I. Outline the chapters

Reading a science textbook can cure even the most chronic insomnia. Learning how to read and retain the information is critical for your success. Many students use highlighters to bring attention to important passages. You will quickly find that *everything* in science textbooks is considered important. Highlighting does not work. A better approach is to learn how to outline a chapter.

Read a paragraph and paraphrase (in your own words) what the paragraph means. This causes you to actively assess the information, and is similar to the process of "deep reading" in literature classes. This is a learned skill, and you will probably write too much for each concept in the beginning. At the end of each chapter, there is a chapter summary. Your outline should not be more than twice the length of the summary (in outline form). More than that, and you are simply copying material, not processing it.

Outline before class, and write your questions in the margins. When we get to that part in the lecture, you can ask a productive question.

### II. Do the homework problems

The Sapling problems are designed to test your understand of concepts. If you get a question wrong, you will have the opportunity to read a tutorial and see if you have learned the concept. When you try it again, you will get a new problem based upon the same concept. You cannot "brute-force" an answer.

You should also try the problems at the end of the chapters. Many people will try a question and look at the answer right away. If the answer is wrong, the temptation is to say "Oh, yeah. I see what I did...." and move on. If you do this, you have learned nothing. A better strategy is to work a number of the problems, then check them all. If you got something wrong, go back and try another similar problem.

### III. Ask Questions

If you have a question in class, the odds are that someone else has the same question. Feel free to ask questions in class. The office hours listed (first page) are those in which I guarantee I will be available. However, I will also be in my office at other times and will be willing to see you if I am free. If the listed times are not convenient, see me and we will arrange a time to meet. **If you are spending more than 2 hours per night on this course, you are doing something wrong. Come see me and I will help you as best I can.**

## DISABILITIES

*Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act (1990) work together to ensure 'reasonable accommodation' and non-discrimination for students with disabilities in higher education. A student who has a physical, psychiatric/emotional, medical, learning, or attentional disability that may have an effect on the student's ability to complete assigned course work should contact the Disability Services Coordinator in the Advising Center, who will review the concerns and decide with the student what accommodations are necessary.*

## COURSE COVERAGE

In first semester organic chemistry (the chemistry of carbon-containing compounds), we will learn the language and many of the principles governing organic chemistry. We will study molecular structures, nomenclature, reactions, and reaction mechanisms of alkanes, alkenes. We will also learn about how we know what molecules "look" like.

The schedule below gives a **tentative** outline of the topics we will study.

<b>Topic</b>	<b>Reading</b>	<b>Lectures</b>
Bonding and Structure	Chapter 1	Feb 6 - 10
Polar Covalent Bonds; Acids and Bases	Chapter 2	Feb 13- 17
Alkanes and Their Stereochemistry	Chapter 3	Feb 20 - 23
<b>EXAM I</b>	<b>Ch 1, 2, 3</b>	<b>Feb 24 (Friday)</b>
Cycloalkanes	Chapter 4	Feb 27 - March 2
Stereochemistry / Chirality	Chapter 5	March 5 - 12
Organic Reactions	Chapter 6	March 14 - 22
<b>EXAM II</b>	<b>Ch 4, 5, 6</b>	<b>March 16 (Friday)</b>
Alkenes I	Chapter 7	March 23 - 26
Alkenes II	Chapter 8	March 28 - April 12
<b>Spring Break (March 31 - April 9)</b>		
<b>EXAM III</b>	<b>Ch 7, 8</b>	<b>April 13 (Friday)</b>
Mass Spectrometry and Infrared (IR) spectroscopy	Chapter 10	April 16 - 19
NMR Spectroscopy	Chapter 11	April 20 - April 27
Aromatic Compounds	Chapter 9	April 30 - May 3
<b>EXAM IV</b>	<b>Ch 9, 10, 12</b>	<b>May 4 (Friday)</b>
Substitution / Elimination	Chapter 12	May 7 - 16

## LABORATORY SCHEDULE

<b>Date</b>	<b>Lab</b>	<b>Assignments</b>
2/6 - 2/9	Check in and Urea Synthesis	
2/13 - 2/16	White Solids	Urea Synthesis report due
2/20 - 2/23	White Solids (cont)	
2/27 - 3/1	Acid/Base Extraction	White Solids report due
3/5 - 3/8	Acid/Base (cont)	
3/12 - 3/15	Chiral Resolution	Acid/Base report due
3/19- 3/22	Stereochemistry of bromination	Resolution report due
3/26 - 3/29	Essential Oils	Bromination report due
3/31 - 4/13	No lab, Spring Break	
4/16 - 4/19	Essential Oils Spectroscopy	
4/23- 4/26	Unknowns: Qualitative Analysis	Essential Oils report due
4/30 -5/3	Unknowns: Spectroscopy / Checkout	
5/7 - 5/10	Unknowns: Presentations
